                                                                                                                                                                                                                                                                                                                                               õ
                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence encodes a Stachybotrys chartarum phenol oxidising enzyme. The invention relates to detergent compositions comprising one (more surfactants and a phenol oxidising enzyme having at least 68% identity to the Stachybotrys chartarum phenol oxidising enzyme. Phenol oxidising enzymes may be used in the detergent, paper, pulp, textile and food industries. They are used for preventing the transfer of dyes in solution from one textile to another during detergent washing, or in modifying the colour associated with dyes and coloured compounds having different chemical structures, such as in pulp and paper bleaching, bleaching the colour of stains on fabric and in detergent and textile
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (UNIL )

The present sequence is that of the Stachybotrys chartarum MUCL 388 spoB gene encoding phenol oxidase B (see AAB20097). The gene was isolated by PCR using primers (see AAB2003-31) based on 2 peptide fragments of the isolated enzyme. The invention provides phenol oxidising enzymes such as phenol oxidase B, or enzymes with at least 68% identity to it, nucleic acids encoding them, expression vectors, filamentous fungus and yeast host cells, and methods for the recombinant production of the phenol oxidising enzymes. The enzymes are useful for bleaching of pulp and paper, fabric stains, and in detergent and textile applications. They show optimal activity at pH 5-11, 7-10.5 or 8-10, and 20-60 or 20-40 degree C.
                                                                                                                                                                                                                                      New phenol oxidizing enzyme, also pulp, textile or food industries, associated with dyes and coloured

A full-length genomic sequence for the phenol oxidase B gene (spoB) is given in AAF30029. The DNA was isolated by PCR using primers (see AAF30030-31) based on 2 peptide fragments of the isolated enzyme. The invention provides phenol oxidising enzymes such as phenol oxidase B, or cenzymes with at least 68% identity to it, nucleic acids encoding them, expression vectors, filamentous fungus and yeast host cells, and methods for the recombinant production of the phenol oxidising enzymes. The enzymes are useful for bleaching of pulp and paper, fabric stains, and in detergent and textile applications. They show optimal activity at pH 5-11, 7-10.5 or 8-10, and 20-60 or 20-40 degree C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New phenol oxidizing enzyme, also useful in the pulp, textile or food industries, especially in associated with dyes and coloured compounds, as transfer applications
                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim

The present sequence encodes a Stachybotrys chartarum phenol oxidising enzyme. The invention relates to detergent compositions comprising one more surfactants and a phenol oxidising enzyme having at least 68% identity to the Stachybotrys chartarum phenol oxidising enzyme. Phenol oxidising enzymes may be used in the detergent, paper, pulp, textile are

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ....s sequence encodes the Stachybotrys chartarum phenol oxidase enzyme of the invention. The invention is used to modify a coloured compound a prevent dye transfer during fabric washing, or for stain bleaching or anti-dye transfer. It is useful in the detergent, paper and pulp, textiand food industries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim

AAA50019
                                                                           Matches
                                                                                                                                                 the S. chartarum phenol oxidising enzyme gene (see AAA50018), provide the enzymes are capable of modifying the colour associated with dyes or coloured compounds, and are produced from a bacterium, yeast or fungus (see AAY9538-40). The phenol oxidising enzymes can be used for pulp and paper bleaching, for bleaching the colour of stains on fabric and for anti-dye transfer in detergent and textile applications. They may also be capable of modifying the colour in the absence or presence of an enhancer. Expression vectors and host cells comprising a nucleic acid encoding a phenol oxidising enzyme, methods for producing the phenol oxidising enzyme, and methods for constructing expression hosts are provided.
                                                                                                                                                                                                                                                                      The present sequence is that of the Stachybotrys chartarum MUCL 038898 cDNA encoding a phenol oxidising enzyme (see AX95537). The invention relates to detergent compositions comprising novel phenol oxidising enzymes that are encoded by nucleic acids capable of hybridising to
                                                                                                                                                                                                                                                                                                                                               Detergent composition comprising novel phenol oxidising enzyme from fungus or bacteria, useful for pulp and paper bleaching, l color of stains on fabric and for anti-dye redeposition -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Phenol oxidizing enzymes encoded by nucleic acid sequences which hybridize to this DNA are claimed, as long as the enzyme is capable of modifying the colour associated with dyes or coloured compounds. The enzymes are useful in detergent compositions and for modifying colors associated with dyes or colored compounds which occur in stains in a sample. The enzymes are also useful for pulp and paper bleaching, anti-dye transfer in detergent and other textile applications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 1791 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disclosure; Fig 5A-B; 45pp;

                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a detergent composition containing a purified phenol oxidising enzyme derived from Stachybotrys. The present sequence encodes Stachybotrys chartarum phenol oxidising enzyme. The enzyme can be used to modify the colour of dyes and other coloured compounds (e.g. for use in pulp and paper bleaching also for removing stains, e.g. food, tea, blood etc., from fabrics) and for preventing dye transfer during fabric washing.
                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 1791 BP;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a detergent composition containing a purified phenol oxidising enzyme derived from Stachybotrys. The present sequence represents a PCR fragment of Stachybotrys chartarum phenol oxidising enzyme. The enzyme can be used to modify the colour of dyes and other coloured compounds (e.g. for use in pulp and paper bleaching also for removing stains, e.g. food, tea, blood etc., from fabrics) and for preventing dye transfer during fabric washing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Convents D, Wang C;

                       This sequence encodes the Stachybotrys chartarum phenol oxidase enzyme of the invention. The invention is used to modify a coloured compound prevent dye transfer during fabric washing, or for stain bleaching or anti-dye transfer. It is useful in the detergent, paper and pulp, text

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1491
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a detergent composition containing a purified phenol oxidising enzyme derived from Stachybotrys. The preser sequence encodes Stachybotrys chartarum phenol oxidising enzyme. The enzyme can be used to modify the colour of dyes and other coloured compounds (e.g. for use in pulp and paper bleaching also for removing stains, e.g. food, tea, blood etc., from fabrics) and for preventing c transfer during fabric washing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Detergent

                                                                                                                                                                                             1551
                                                                                                                                                                                                                                                                                                                                                                                               This sequence encodes the Stachybotrys chartarum phenol oxidase enzyme of the invention. The invention is used to modify a coloured compound of prevent dye transfer during fabric washing, or for stain bleaching or anti-dye transfer. It is useful in the detergent, paper and pulp, text.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 21;

The present sequence is that of the Stachybotrys chartarum MUCL 38898 cphenol oxidising enzyme gene, including promoter and terminator sequences. The gene was isolated from genomic DNA using primers (see AAA50023-24) based on isolated peptides of the enzyme. The relates to detergent compositions comprising novel phenol oxidising correlates to detergent compositions comprising novel phenol oxidising to the present DNA sequence, provided the enzymes are capable of hybridising to modifying the colour associated with dyes or coloured compounds, and are produced from a bacterium, yeast or fungus (see AN95539-40). The phenol oxidising enzymes can be used for pulp and paper bleaching, for bleaching the colour of stains on fabric and for anti-dye transfer in detergent and textile applications. They may also be capable of modifying the colour in the absence or presence of an cenhancer. Expression vectors and host cells comprising a nucleic acid encoding a phenol oxidising enzyme, methods for producing the phenol oxidising enzyme, and methods for constructing expression to hosts are provided.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Detergent composition comprising novel phenol oxidising enzyme obtained from fungus or bacteria, useful for pulp and paper bleaching, bleaching color of stains on fabric and for anti-dye redeposition -

Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmet, Frisch, Atkins and Wing). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Math). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or above. For more details on library preparation and

                                                                                                                                                                                 Email: tshini@genes.nig.ac.jp

A backbone of the vector is basically from pBluescript(KS), that was in vivo excised from a modified lPs phage vector (Mo bi Tec, Germany). 5' end of the CDNA that was digested with Xhol was: ligated to SalI site of the vector and the 3' end including pblyA tail was ligated to BamHI site of the vector. cDNA instert could k amplified with conventional T7 and T3 primers. This full-length cDNA ilbrary was generated basically according to the method described in The Plant J 15, 707-720 (1998) Seki M. et al. Protonemata were blended by the POLYTRON, and then cultivated on the BCDATG medium for 13-14 days under the continuous light.
